

An abstract geometric design on the left side of the slide. It features a large purple semi-circle at the top left, a teal rectangle below it, a light blue circle to the right of the teal rectangle, an orange semi-circle at the bottom left, and a yellow semi-circle to the right of the orange one.

Midterm Project Update

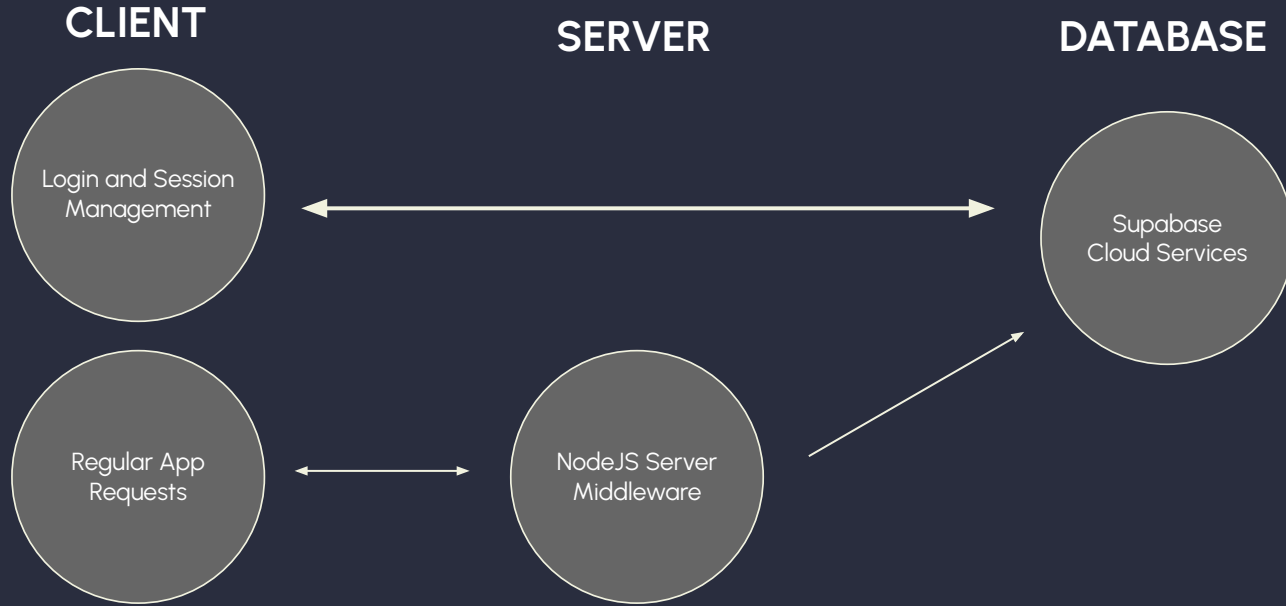

**Matt Smith
Jaden Henderson
Josh Burgenmeyer**

Project Overview

- **Specialty Coffee Brewing Guide**
- **Core Features:**
 - Coffee inventory
 - Recipe creation
 - Brew timer that displays your selected recipe
 - Dashboard to view coffee consumption insights
- **Technologies**
 - React, Node, Express, Postgres
 - Progressive web app (PWA)

3.2.2	Performance Testing			0%																																				

Network Structure

Sends POST requests from the frontend to an express/node JS server that edits a Supabase db

Design Decisions

Straightforward network structure

Data is sent to a single handler that parses it and edits the db accordingly.

Security handled by established services

Login/Sign Up authorizations and session management tokens are handled completely by Supabase.

Database handled by cloud provider

Supabase provides a simple and flexible way to store and modify data without having to worry too much about syntax.

Example Network Request

CLIENT

[illegible]

SERVER

```

77 app.post("/api/addCoffee", requireUser, async (req, res) => { // POST addCoffee
78   var parsed = FormDataSourceSchema.safeParse(req.body);
79   console.log(parsed);
80
81   if (!parsed.success) {
82     return res.status(400).json({ error: 'Invalid data', details: parsed.error.flatten() });
83   }
84
85   try {
86     const userId = req.user.id;
87
88     const payload = { ...req.body, user_id: userId };
89
90     const { data, error } = await supabaseAdmin.from('coffeeBag').insert(payload).select('*').single();
91
92     if (error) {
93       console.error('Supabase insert error:', error);
94       return res.status(500).json({ error: 'Database error' });
95     }
96
97     return res.status(201).json({ ok: true, coffee: data });
98   } catch (err) {
99     console.error('Server error:', err);
100    return res.status(500).json({ error: 'Server error' });
101  }
102 });

```

React Demo

- Future Plans:
 - Adding more functionality
 - Finalize colors and design
 - Improving ease of use and accessibility
